

# GALAXY SONG

Just remember that you're standing on a planet that's evolving,  
revolving at **900** miles an hour.

It's orbiting at **19** miles a second (so it's reckoned)

a sun that is the source of all our power.

The sun and you and me and all the stars that we can see

are moving at a **MILLION** miles a day,

in an outer spiral arm at **40,000** miles an hour,

of the galaxy we call the milky way.

Our galaxy itself contains **100 BILLION** stars.

It's **100,000** light years side to side.

It bulges in the middle **16,000** light years thick, but

out by us it's just **3,000** light years wide.

We're **30,000** light years from galactic central point.

We go round ev'ry **200 MILLION** years.

And our galaxy is only one of **MILLIONS** and **BILLIONS**

In this amazing and expanding universe.

Our universe itself keeps on expanding and expanding

In all the directions it can whizz.

As fast as it can go, the speed of light you know,

**12 MILLION** miles a minute, that's the fastest speed there is.

So remember when you're feeling very small and insecure,

How amazingly unlikely is your birth.

And pray that there's intelligent life somewhere up in space //

'cause there's bugger all down here on earth.
